LOOK — AI-Powered Formal Wear Shopping Platform

LOOK is a modern AI-powered online shopping platform for **formal wear for men, women, and kids**. The platform combines e-commerce functionality with an intelligent AI fashion stylist that helps customers discover products based on their preferences, occasions, style, and shopping history.

✨ Features

🛍️ Online Shopping
- Browse formal wear for **Men, Women, and Kids**
- Shopping cart
- Wishlist
- User accounts
- Personalized product recommendations

🤖 AI Fashion Stylist

LOOK includes an advanced AI-powered chatbot designed to act as a personal fashion stylist.

The AI stylist can:

- Understand natural-language shopping requests
- Recommend products based on customer preferences
- Help customers choose outfits for different occasions
- Suggest styles based on color, category, and occasion
- Answer product-related questions
- Provide personalized shopping assistance
- Use customer information and shopping activity to improve recommendations

🧠 Personalized Shopping Experience

The platform is designed to provide personalization across customer interactions.

Customer-related information can be connected to their account, including:

- Previous conversations
- Style preferences
- Wishlist
- Recently viewed products
- Previous orders
- Product interests

This allows the AI stylist to provide more relevant recommendations instead of treating every conversation as completely new.

Backend & Database
- Supabase
- PostgreSQL
- Authentication
- Database tables and relationships

AI
- AI-powered fashion chatbot
- Natural-language product recommendations
- Personalized shopping assistance

Development
- Lovable

🗄️ Database

The application uses **Supabase/PostgreSQL** to manage application data.

🧩 AI Chatbot Architecture

The AI stylist is designed to connect the customer's shopping experience with product data.

A simplified flow:

```text
Customer
  ↓
AI Fashion Stylist
  ↓
Customer Preferences
  ↓
Product Database
  ↓
Recommendation Engine
  ↓
Personalized Product Recommendations
```

The goal is to make the chatbot function as a **personal shopping assistant**, rather than simply answering general questions.

🎯 Project Goals

The goal of LOOK is to combine traditional e-commerce with AI-powered personalization to create a more engaging and intelligent shopping experience.

Instead of requiring customers to browse hundreds of products manually, the AI stylist helps customers discover products through a conversational shopping experience.
